

Cyber Club

Programs and Activities:

Students play motivating games such as the Magic School Bus Inside a Volcano, Magic School Bus Whales and Dolphins, and the Magic School Bus Flight. While exploring different aspects of these educational programs, students discover different kinds of information about the ocean and environments as they play and explore. In the Magic School Bus Whales and Dolphins a classroom science teacher named Ms. Frizzle takes her class on a series of adventures involving the natural world. Students hunt for hidden treasures by following clues that lead them through different ocean zones. Students have the opportunity to play games and do science experiments as they explore the oceans and environments.

Students also play math games such as Turbo Math partnering with each other for friendship and help. Students explore and enjoy the interactive element of online learning games while having fun. Students use an online geography game to learn the states by dropping and dragging the states onto a map of the United States. Students also visit a virtual geoboard-virtual manipulative site where students create their own geometric shapes using the virtual geoboard. Some students use word processing programs to create greeting cards. Students make use of letters, clip art, and photographs to create their greeting cards.

Students explore websites that include educational games, puzzles, and other activities that get students excited about learning.
